

Firm Overview

Parvin Asset Management

offers traditional and alternative investment management to address the specific needs and preferences of the individuals, families and institutions we serve. Our objective is to preserve capital and to provide higher risk-adjusted returns than the market. To accomplish this goal for equities, we concentrate on the fundamental importance of value and profitability. Equity portfolios are constructed with focused positions since we view too much diversification as lowering the opportunity for higher returns without reducing risk. As a result, we build portfolios with stocks that are typically spread among 20 equal-weighted positions. In general, we look for stock holdings that are usually characterized by high returns on capital; steady earnings growth; reasonable valuation; substantial income, as appropriate; and diversification across six, or more, economic sectors.

Investment Strategy

Parvin Sector Focused High Income is a traditional long-only equity strategy designed to generate returns that are derived primarily from income. Equity selections focus on a limited number of economic sectors and industry groups which feature consistently high-yielding dividends. The emphasis is placed almost entirely on income, generally without much return from growth. Dividend yields on Sector Focused High Income portfolios are often notably higher than market levels.

Portfolio Highlights

High income and limited growth are the primary objectives of this strategy

Focused portfolio which is usually concentrated in up to four economic sectors or industry groups with as many as 20 equally-sized stock positions

Selection process concentrates on finding high yielding, relatively well-valued businesses with proven leadership in their respective markets

Investments generate some qualified income, but a large portion of dividend payments are not qualified for income tax purposes
